Subject: RE: Treasure Island FAQ
Date: Monday, March 25, 2019 14:37:32
Attachments: [TI RAB No. 197 TtEC Slide 03-25-21.pptx](#)

Per discussion with DTSC.....RAB slide attached as well.

UPDATED RESPONSE: The Navy understands the community concerns related to recent reporting about Tetra Tech EC work at Treasure Island. The Navy would like to reassure residents that there is no radiological health risk to those who live on, work on or visit Treasure Island. Radiological work performed by Tetra Tech EC and other contractors has been reviewed by Navy. Work is being reviewed by regulatory agency experts including the California Department of Health and Department of Toxic Substances Control.

Subject: Treasure Island FAQ

Kim,

We're planning to update one of our FAQs as noted below. The response is taken from approved material in our RAB slide on TT. I added "and other contractors" to the third sentence to make it responsive to the question. Please let me know if you have any concerns or edits.

Is the Navy confident in the radiological work performed by Tetra Tech EC and other contractors at Treasure Island?

CURRENT RESPONSE ON WEBSITE: The Navy is confident that findings are based on radiological data for work performed by numerous contractors at Treasure Island are consistent and accurate. Navy radiological experts review radiological program data; these experts found the initial problem at Hunters Point and have not identified similar problems at Treasure Island. The California Department of Public Health will continue to conduct confirmation scanning and sampling at remaining Treasure Island sites.

UPDATED RESPONSE: The Navy understands the community concerns related to recent reporting about Tetra Tech EC work at Treasure Island. The Navy would like to reassure residents that there is no radiological health risk to those who live on, work on or visit Treasure Island. Radiological work performed by Tetra Tech EC and other contractors has been reviewed by Navy and regulatory agency experts including the California Department of Health and Department of Toxic Substances Control. All agencies confirm that radiological data collected at Treasure Island is consistent, accurate, and supports the conclusion that there is no radiological health risk to the community.

Bill and DC – Please see edit that I made to the 3rd sentence of the response (added “and other contractors”).

Thank you,

Sarah Ann
